

How we make money. All of it, on one page.

GoodStrata is free for your owners corporation. We earn a small, published margin on payments that actually move — and nothing at all on the choices you make. Here is every dollar we take, and every dollar we refuse.

Good Strata Pty Ltd ACN 684 135 760 Apache-2.0 open source

Free for your owners corporation

Free, not freemium. There is no per-lot fee, no subscription, no setup charge, and no exit charge for your owners corporation — ever. You run GoodStrata one of two ways, and both cost your building nothing to use. Self-host it: the whole platform is Apache-2.0 open source, and it runs on PostgreSQL and one process. Or take the hosted free tier: we run the servers, you pay nothing to use the software. For comparison, a traditional strata manager charges roughly \$300–\$600 per lot, per year, for work that is mostly admin. Your building's copy of that work, run by agents and audited to the tool-call, is \$0.

- **Self-host:** Apache-2.0, PostgreSQL plus one process, \$0 forever.
- **Hosted free tier:** we run it, your owners corporation pays nothing to use it.
- **No per-lot fee, no subscription, no onboarding fee, no cancellation fee.**
- **Open source,** so “no lock-in” is a claim you can verify in the repo — not a sales line.

How we actually make money

We take a small, disclosed margin on money that moves through the platform, and we sell a paid managed service to owners corporations that would rather not run their own servers. That's the whole business. Levies coming in are the primary line: owners pay by PayID or NPP through Monoova, the payment reconciles itself to the cent against the right lot, and we keep a thin, published margin on that transfer. Contractor payments going out work the same way. The number that matters: that margin is identical no matter which contractor the committee chooses, so paying one plumber earns us exactly what paying another does.

- **Levies in (primary):** owners pay by PayID/NPP via Monoova, auto-reconciled to the cent — we keep a small, published margin on the transfer.

- **Contractor payments out:** the same thin margin on the outbound payment — the same figure whichever contractor wins the work.
- **Managed service:** a paid, up-front-priced tier for owners corporations that want us to host and run it instead of self-hosting.
- **Statutory certificates:** a small platform component on the Section 32 certificate, shown as its own line item.
- **We earn only on money that moves.** No hidden fixed fees sit underneath any of this.

What we will never do

The reason your strata fees feel like a black box is a conflict of interest built into the traditional model. A conventional manager earns invisible commissions on the insurance they place for your building, and kickbacks from the contractors they appoint to it. So the person choosing your insurer and your tradespeople is quietly paid more for some choices than others — and the owners footing every bill can't see a cent of it. GoodStrata takes none of it, and never will. Because our margin is flat and sits on the payment rail, there is nothing for us to steer. The conflict isn't managed or disclosed away. It structurally isn't there.

- ✗ **No insurance commissions.** We take no share of your premium — at renewal the committee chooses and our revenue doesn't change.
- ✗ **No contractor kickbacks.** No trade pays to be in the pool or to be picked.
- ✗ **No margin-ranking.** The AI never orders contractors by what we earn — it earns the same either way; the committee chooses on the evidence.
- ✗ **No invoice markups.** The contractor's price is your price.

The difference, line by line

Same job — your money, your maintenance, your meetings. The difference is where the money goes, and whether you can see it.

	TRADITIONAL STRATA MANAGER	GOODSTRATA
Management fee	~\$300–\$600 per lot, per year	\$0 — free for the owners corporation
Insurance commission	Takes an invisible cut of your premium	None — the committee chooses; our revenue is unchanged
Contractor kickbacks	Paid to appoint certain trades	None — no trade pays to be in the pool or to win
Invoice markups	May mark up what the tradie charges	None — the contractor's price is your price
How they're paid	Fixed fees plus commissions you never see	A small, published margin on payments that move
Where you can see it	A monthly statement you're asked to trust	Every fee on an append-only audit log

How you can check

You don't have to trust any of this. Every fee we take lands on the same append-only audit log as everything else: our margin is its own event, stamped with the amount to the cent, the timestamp, and the causation chain back to the payment that triggered it. There's no second set of books — the log is the only book, and a database trigger stops anyone, us included, from editing it after the fact. Then read the code: the platform is Apache-2.0 on GitHub, so the logic that computes what we keep is in the open. “No hidden fees” isn't a slogan; it's a claim you can open the demo and read, or clone the repo and grep.

- **On the ledger:** every fee is an event you can read; no off-ledger charge can exist.
- **In the open:** the code that calculates our margin is Apache-2.0 on GitHub.
- **Deterministic:** what we keep is computed by tested code, not a model — \$0.00 of it is guessed by an LLM.
- **Checkable, not promised:** open the live demo, read the audit log, then read the source.

The numbers behind the model.

\$0

per-lot fee, subscription, and setup — forever

\$300–\$600

per lot, per year: what a traditional manager charges

0

insurance commissions we take

0

contractor kickbacks we take

Same margin

whichever contractor the committee picks

Apache-2.0

— the code that computes our cut is public
