

GET YOUR BUILDING ON GOODSTRATA

Strata management that costs your building nothing.

GoodStrata is an open-source, AI-run owners corporation platform. The agents do the operational work — levies, arrears, maintenance triage and contractor dispatch, meeting notices and minutes. Owners and committee only approve, vote, or escalate through a decisions inbox.

HOW IT WORKS

1 Onboard your plan

Run the onboarding wizard against your real plan of subdivision. The agents load your lots, entitlements and levy schedule.

2 Agents do the work

Levies raised, arrears chased, maintenance triaged, contractors dispatched, notices and minutes drafted — every step evented.

3 You approve or vote

Act through a decisions inbox. Every action lands on an append-only log you can audit down to each model tool-call.

Free for your owners corporation

\$0 TO THE OC

WHAT IT COSTS

No subscription. No per-lot fee. Self-host with Postgres and one process, or use the hosted free tier.

HOW GOODSTRATA EARNs

A transparent margin on payments that move: inbound levy payments (NPP/PayID via Monoova) and outbound contractor payments. Plus an optional paid managed service for OCs who want us to host.

THE TRANSPARENCY WEDGE

No hidden insurance commissions. No contractor kickbacks — the conflict of interest that defines traditional strata. The AI never ranks a contractor by what GoodStrata earns; the committee chooses on attached evidence, and every dollar is on the audit log.

WHY YOU CAN TRUST IT

\$0.00

computed by an LLM — levies, penalty interest, reconciliation and vote weighting are deterministic, tested code.

append-only

event log records every action, human or agent, down to each model tool-call — the whole manager is auditable.

0 / 0

hidden insurance commissions and contractor kickbacks — the two invisible income streams we refuse to earn.
